

2011 Harvest Performance Summary

Prepared By:
Langfritz Seed Inc.

The Right Products for Every Acre.

October 27, 2011

Dear Valued Customer:

First off, THANK YOU for choosing Pioneer. Right now is a great time to talk about how Pioneer® brand products have performed this season and the great savings opportunities available during the Pioneer Preseason Rewards period.

Pioneer® brand corn hybrids with Herculex® insect protection traits are setting new standards. Herculex RW and Herculex XTRA, "The Better Bt" combines outstanding rootworm control with control of black cutworm and western bean cutworm and other yield-robbing pests.

Pioneer is proud to offer the majority of our above/below ground protected hybrids as **Optimum AcreMax1** for the 2012 planting season. Control rootworm on every acre of your field with **Optimum AcreMax1** products without having to use a separate rootworm refuge or granular insecticide while maximizing overall field yields.

Along with the strength of our current lineup, I would like to mention a few new hybrids that have performed outstanding in our area this fall...**P0210HR, P0533XR, P0621HR, P0832AM1 & P1151HR.**

Pioneer® brand soybeans -- "The #1 Choice" -- have performed outstanding again this fall. Our industry-leading lineup of soybean varieties such as **92Y51, 92Y74, 92Y75 & 92Y91** are proving why planting Pioneer soybeans year after year gets you more bushels in your bin.

Pioneer Preseason Rewards Program -- To help you get the most out of your next seed investment, take a look at the highlights of the 2012 Rewards program. Invoice and pay by November 23, 2011 and qualify for:

1. **Commitment Reward Cash Discount of 10%**
OR
2. **Commitment Reward Deferred Payment Discount of 7%;**
PLUS
3. **Deferred Payment Terms of Prime Interest through Dec 1, 2012**

Along with these great savings available by **November 23, 2011**, you also qualify for the Pioneer Quantity Savings discount.

From high-yielding Pioneer brand soybeans to our genetically diverse corn lineup, including hybrids available with the Optimum AcreMax1 and Optimum AQUAmax technology, we have what you need to help maximize profit on your farm and the 2012 Rewards Program makes it even better!

Thanks again for your business and we look forward to working with you in 2012!

P.S. Enclosed are some yield comparisons and information from the area from this fall. Enjoy!

PIONEER® brand products are provided subject to the terms and conditions of purchase which are part of the labeling and purchase documents. Pioneer is a brand name; numbers identify varieties and products. ®, SM Trademark and service mark, registered or applied for, of Pioneer Hi-Bred International, Inc., Des Moines, Iowa, U.S.A.

How to Make the RIGHT Hybrid Selection Choices - More Often.

1. Do not look at just one location as strips can vary due to things besides the hybrid or variety:

- Compaction
- Crop history
- Uneven fertilizer or manure application
- Soil type differences
- Uneven plant height
- Tillage
- Manure history
- Insect damage
- Herbicide overlap or damage

2. The more locations that you compare the odds of selecting the best hybrid or variety increase!

Chances of selecting a hybrid with a documented yield advantage

| Number of Locations | 12 Bushels/A | 6 Bushels/A |
|----------------------------|---------------------|--------------------|
| 1 | 60% | 52% |
| 10 | 90% | 75% |
| 30 | 95% | 90% |
| 200 | 98% | 95% |

3. Plot size does affect the odds of selecting the "Best" hybrid:

| # of Hybrids in Plot | Chances of Finding the Best Hybrid |
|-----------------------------|---|
| 2 | 52% |
| 3 | 42% |
| 4 | 33% |
| 10 | 13% |
| 20 | 7% |
| 30 | 6% |

* Based on one hybrid having a 6 Bu/A Advantage.

4. The larger the percentage wins for a hybrid, the better the yield:

| Yield Advantage | Percent Wins |
|------------------------|---------------------|
| 0 | 50% |
| 2 | 56% |
| 5 | 65% |
| 10 | 78% |
| 15 | 88% |

* Comparing two hybrids, side-by-side at 150 bushel yield level and .05 LSD.

2012 Hybrid Placement

PRODUCT POSITIONING TO MANAGE

Goss's Bacterial Wilt

Goss's Wilt has been found in the central corn belt in the past, having been confirmed in Wisconsin, Illinois and Iowa in the early 1980's. The extent of acres affected in 2011 in Iowa is more dramatic than prior years. We know the best tool to manage Goss's Wilt is choosing tolerant hybrids. As we prepare to position products for next season, consider the following guidelines.

1 Understand infection level

Goss's Wilt overwinters in corn residue so fields that are continuous corn have the highest risk of future infection. While other plants (grain sorghum, shattercane, green foxtail, barnyard grass) have shown to harbor the bacteria, corn residue is the main source of inoculum. The bacterium overwinters primarily in stalks, but as residue decomposes the ability of the bacteria to survive declines.

Another key point is to ensure that Goss's Wilt is present in the field. There are multiple factors that can cause brown leaves in a corn crop. These can include:

- Northern Corn leaf blight
- Anthracnose Top Dieback
- Sunscald
- Drought
- Hybrid senescence (maturing from the top)
- Other foliar diseases

Be sure to verify a suspected Goss's Wilt infection in order to make the best management plan.

While it is unrealistic to describe all scenarios to predict disease risk, the following table has example suggestions for using the Pioneer Hi-Bred disease ratings to place Pioneer brand hybrids.

| EXAMPLES OF GOSS'S WILT RISK ASSESSMENT | | | |
|---|---|--|---|
| Highest Risk | Moderate Risk | Moderate Risk | Lowest Risk |
| Continuous corn | Continuous corn | Corn/soy rotation | No disease present in field prior two years |
| 30% tillage with corn w/ annual medic in past year | Slight infection in prior year | Susceptible hybrid with significant infection 2 years ago | Tolerant hybrid planted prior year and going to corn in current year |
| Heavy residue on soil surface | Little stalk residue on soil surface | | |
| PIONEER HI-BRED GOSS'S WILT DISEASE SCORES (THROUGH 2010) | | | |
| 7* or higher | 6* or higher | 5* or higher | 4* or higher |

*Disease and Pest Ratings: 8-9 = highly resistant; 6-7 = Resistant; 4-5 = Moderately Resistant; 1-3 = Susceptible

2. Know your products There is no standard scale across the seed industry that allows accurate comparison of Goss's Wilt tolerance between companies. Pioneer Hi-Bred uses several techniques to screen and characterize products for tolerance to Goss's Wilt. These include screening nurseries where artificial infection is induced, scoring Research and IMPACT locations where natural infections occur and using genetic markers to sort inbreds and hybrids during product development. The results of the artificial and natural infections are used to assign Goss's Wilt scores to commercial products at the RC01 stage, or first year of commercial product volumes. Stay current on product observations in your area and updates to product characterization from your Account Manager or Area Agronomist.

3. Make a plan Past experience managing this disease in Nebraska and western states indicates the highest risk of future problems tends to be in high risk fields that were planted with highly susceptible hybrids that then had a weather event (hail or wind) allowing broad infection in the crop. Identifying those "hot spots" is key in getting the best solution in place for next season. Using a Pioneer FIT® Field Plan to sort and track highest risk fields and the appropriate product for those fields will increase your odds of getting the right product on the right acre.

AQUAmax™

New corn hybrids from Pioneer that help you make the most of moisture

New Optimum® AQUAmax™ hybrids from Pioneer offer growers additional choices to help minimize risk and maximize their productivity under drought stress.

Developed and tested utilizing Pioneer's extensive drought technology research and proprietary Accelerated Yield Technology (AYT™) system, Optimum AQUAmax hybrids help deliver a yield advantage in water-limited environments.

Why consider Optimum® AQUAmax™ hybrids?

Water limitations and heat stress are key factors that can impact yield in many areas of the country, especially the western Corn Belt. Pioneer has been a leader in developing corn hybrids for such water-limited areas for more than 50 years.

In recent years, Pioneer researchers have been using the latest molecular breeding tools, including Pioneer's proprietary AYT system, to rapidly scan and identify key native genes within corn plants responsible for increasing yields under water-limited conditions. New Optimum AQUAmax hybrids are the products of this research.

Validated through extensive on-farm and research trials

In 223 on-farm comparisons, product advancement tests and research trials in 2008-2010 in water-limited environments

concentrated in Nebraska, Colorado, Kansas and Texas and controlled stress evaluations in California and Chile, Optimum AQUAmax hybrids were

tested against leading commercially available competitor and Pioneer® brand hybrids. Optimum AQUAmax hybrids demonstrated a 5.0 percent average yield advantage over the leading commercial hybrids tested.*

Limited quantities available for 2011 planting

The initial class of Optimum AQUAmax hybrids includes five hybrid platforms across a range of maturities and technology packages. These hybrids will be available in limited quantities for 2011 planting. For the latest information on Optimum AQUAmax hybrids, contact your Pioneer sales professional.

*Water-limited environments are those in which the water supply/demand ratio during flowering or grain fill was less than 0.66 on a 0-1 scale (1 = adequate moisture as determined by Pioneer) using Pioneer's proprietary EnClass® system and in which the average yield of the commercially available hybrids was less than 150 bu/acre. Moisture levels were measured either at trial location or the nearest weather station.

Product performance in water-limited environments is variable and depends on many factors such as the severity and timing of moisture deficiency, heat stress, soil type, management practices and environmental stress as well as disease and pest pressures. All hybrids may exhibit reduced yield under water and heat stress. Individual results may vary.

AcreMax¹

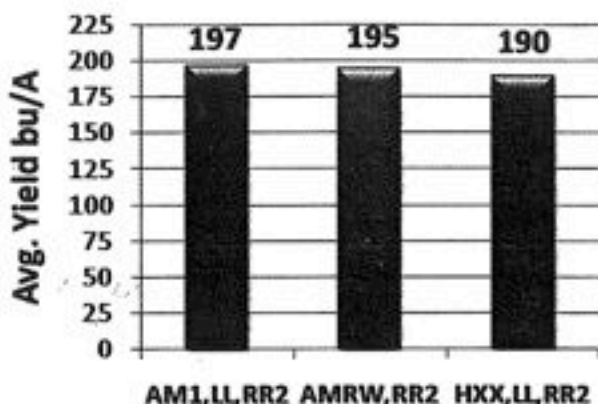

ABOVE/BELOW

Proven Performance. Proven Genetics.

Proven Performance

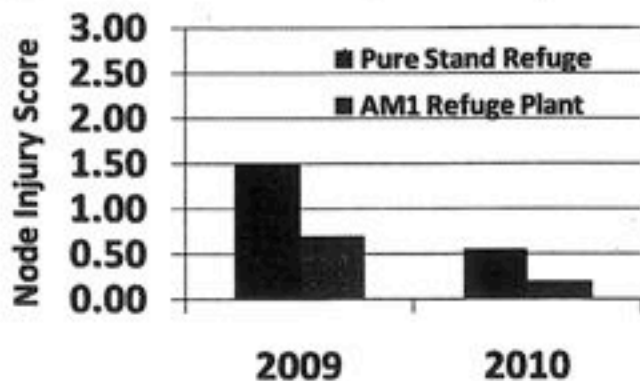

- More than three years of testing shows Optimum[®] AcreMax[®] 1 Insect Protection products (90% Herculex[®] XTRA insect protection + 10% Herculex[®] I insect protection trait) consistently deliver the same strong yield and performance as their Herculex[®] XTRA counterparts.
- 2010 on-farm trial results (see graph at right) illustrated that both Optimum[®] AcreMax[®] 1 AND Optimum[®] AcreMax[®] RW products produced the same high yields as Herculex[®] XTRA products in the same genetic platforms.
- Help maximize farm yields by placing in-plant protection on refuge acres formerly at risk for insect damage and yield loss.

Optimum[®] AcreMax[®] 1 and Optimum[®] AcreMax[®] RW product results – Fall 2010 # of Locations = 186

Data collected through October 22, 2010 from Illinois, Indiana, Missouri, Iowa, Ohio and Michigan. Multi-year and multi-location information is a better predictor of future performance. Product responses are variable and subject to any number of environmental, disease and pest pressures. Do not use this or any other data from a limited number of trials as a significant factor in product selection.

2009 & 2010 Optimum[®] AcreMax[®] 1 University Root Feeding Trials

Mean Root Ratings (0-3 Iowa State Node Injury-Scale) averaged across multiple Corn Belt University testing locations (7 in 2009, 9 in 2010).

Corn Rootworm Control

- Multi-Year testing shows refuge plants in a field of Optimum[®] AcreMax[®] 1 products experience rootworm feeding levels similar to and often significantly less than a pure stand of refuge. This can be attributed to two factors:
 1. The high percentage of plants in the field with Herculex[®] XTRA protection significantly reduces the overall population of surviving rootworms. The integrated refuge plants containing only the Herculex[®] I trait appear to benefit from the reduced rootworm population by sustaining less injury than a separate pure-stand refuge of the same seed.
 2. Poncho[®] 1250 insecticide treatment on the integrated refuge plants provides additional rootworm protection.

PLANT IT AND THE PROTECTION GROWS

Poncho®/VOTIVO™ seed treatment combines the most trusted seed-applied insecticide in corn with the most revolutionary, complete nematode protection on the seed. The result is a powerful new seed treatment for your corn and soybean seed that protects early-season seedlings and roots from numerous insect and nematode pests.

Poncho/VOTIVO employs a new biological mode of action with a unique bacteria strain that lives and grows with young roots, creating a living barrier that prevents important nematode species from reaching the roots. Poncho/VOTIVO also provides control of many critical early-season insect pests. This dual protection results in improved plant vigor, which in turn results in a more uniform crop and consistently higher yields.

Poncho/VOTIVO brings immediate, consistent protection through the critical phases of vigorous plant growth. From seed germination to plant establishment, Poncho/VOTIVO secures a foundation for the best yields.

PONCHO/VOTIVO ADVANTAGES:

CORN

- Controls black cutworms, wireworms, and other important early-season insects common in corn.
- New mode of action protects against nematode damage from a wide range of species.
- Valuable seed is protected from the moment it is planted.
- Maximizes early-season plant stands, uniformity, and vigor for higher yields.

SOYBEANS

- Controls early-season aphids, overwintering bean leaf beetles, and other important early-season insects common in soybeans.
- New mode of action protects against nematode damage from soybean cyst nematode (SCN) and other significant types of nematodes.
- Complements existing SCN-resistant soybean varieties for even greater protection.
- Promotes higher yields through a healthier root system and a more vigorous and uniform crop.

AVAILABLE FOR CORN, COTTON, AND SOYBEANS.

P9917 AM1

(AM1, LL, RR2)

99 CRM (96 Silk)

New 99 day leader hybrid

Agronomic package includes:

- ✓ Yield advantage over all current 100 CRM products.
- ✓ Very good drought tolerance.
- ✓ Some early root lodging observed. Late roots very good.
- ✓ Will not be a late harvest option due to late season stalk.
- ✓ Will respond well to fungicide application

| Key Environments | |
|---------------------------|----|
| High Yield | HS |
| Early Planting/Cold Soils | S |
| High Residue | S |
| Drought Prone Soils | HS |
| Late Harvest | MA |
| Corn After Corn | S |
| Poorly Drained Soils | S |

PIONEER.
A DUPONT COMPANY

P0210HR

(HX1, LL, RR2)

102 CRM (106 Silk)

New Yield Leader for 102 CRM

Agronomic package includes:

- ✓ Great foliar disease package & late season plant health
- ✓ AQUAmax hybrid with exceptional drought tolerance
- ✓ Top end yields for 102 CRM
- ✓ Early root is main watch out. Late season stalks are average.
- ✓ Highly suitable for many environments & soil types
- ✓ Plant in mid to late April for best stands

| Key Environments | |
|---------------------------|----|
| High Yield | HS |
| Early Planting/Cold Soils | HS |
| High Residue | HS |
| Drought Prone Soils | HS |
| Late Harvest | S |
| Corn After Corn | S |
| Poorly Drained Soils | S |

P0533AM1

(AM1, LL, RR2)

105 CRM (97 Silk)

Max Yield 105 CRM

Agronomic package includes:

- ✓ Very strong drought tolerance
- ✓ Will respond well to a fungicide for maximum yield and is highly encouraged with this hybrid
- ✓ Keep an eye on late season stalks
- ✓ Root strength observations in 2011 were improved over 2011
- ✓ Short statured hybrid for easier residue management

| Key Environments | |
|---------------------------|----|
| High Yield | HS |
| Early Planting/Cold Soils | S |
| High Residue | S |
| Drought Prone Soils | HS |
| Late Harvest | MA |
| Corn After Corn | S |
| Poorly Drained Soils | S |

P0621HR

(HX1, LL, RR2)

106 CRM (109 Silk)

New 106 day double

Agronomic package includes:

- ✓ Good emergence in 2010 & 2011
- ✓ Will work well for early planting/cold soils
- ✓ Solid yield gain over P0717HR.
- ✓ Average disease package will make it a possible fungicide candidate (NCLB).
- ✓ Keep on better ground for strongest results

| Key Environments | |
|---------------------------|----|
| High Yield | HS |
| Early Planting/Cold Soils | S |
| High Residue | S |
| Drought Prone Soils | S |
| Late Harvest | S |
| Corn After Corn | S |
| Poorly Drained Soils | HS |

P0832AM1

(AM1, LL, RR2)

108 CRM (108 Silk)

New high yielding 108 day triple

Agronomic package includes:

- ✓ Very strong yield advantage over current 108 CRM triples.
- ✓ Very good plant health & late season stalks
- ✓ Will be a good fit for poorly drained soils
- ✓ Average roots so don't plant in fields with history of severe CRW pressure or compaction
- ✓ Will perform well at mid (32-33k) planting rate

| Key Environments | |
|---------------------------|----|
| High Yield | HS |
| Early Planting/Cold Soils | S |
| High Residue | HS |
| Drought Prone Soils | S |
| Late Harvest | HS |
| Corn After Corn | HS |
| Poorly Drained Soils | S |

P1151HR

(HX1, LL, RR2)

111 CRM (106 Silk)

New Late Season Double

Agronomic package includes:

- ✓ AQUAmax hybrid with very strong drought tolerance
- ✓ Very good late season roots & grain quality
- ✓ Foliar disease package is not a strength and most likely will benefit from a fungicide application to assist with NCLB.
- ✓ Strong brittle snap resistance
- ✓ Will work well on a variety of soil types
- ✓ Limited supply for 2012

| Key Environments | |
|---------------------------|----|
| High Yield | S |
| Early Planting/Cold Soils | S |
| High Residue | S |
| Drought Prone Soils | HS |
| Late Harvest | S |
| Corn After Corn | S |
| Poorly Drained Soils | S |

- NOTES: * Maximum RM difference: unrestricted
 * Conventional US Price \$6.70 per bu
 * High Oil (HOSX) US Price \$6.95 per bu
 * Waxy Premium (WX) US Price \$7.10 per bu
 * White Premium (WH) US Price \$7.20 per bu
 * Income advantage/acre is calculated as yield advantage multiplied by the price as listed
 * and drying costs of .040 per point of moisture.
 * Experiments included: FAT, Weigh Wisely, Sales Rep, PKP, Master
 * All yields expressed in: Bu/A

2012 SOYBEAN SEED SIZE VALUE GUARANTEE

Pioneer® brand soybean varieties offer growers industry-leading genetics across a wide range of maturities. Top yield potential with protection from key pests, enhanced through our exclusive Accelerated Yield Technology (AYT™) system, are reasons why growers across the country plant more of their acres to Pioneer soybeans than to any other brand.

Another innovation Pioneer is pleased to offer once again for the 2012 planting season is the "Soybean Seed Size Value Guarantee."

What is it?

- The Pioneer Soybean Seed Size Value Guarantee (SSVG) is offered across U.S. and Canadian Sales Representative areas.
- The Seed Size Value Guarantee helps reduce seed size cost variation per acre by using a price adjustment starting at 2,800 seeds per pound across all varieties and lot numbers. Growers receive a graduated discount on lots with fewer than 2,800 seeds per pound.
- Examples: Variety A's seed size is 2,400 seeds-per-pound, or 14% fewer seeds than the 2,800 seeds-per-pound base. The grower will receive a 14.3% discount adjustment for Variety A's large-sized seed. Variety B's seed size is 2,700 seeds-per-pound, or 4% fewer seeds than the 2,800 seeds-per-pound base. The grower will receive a 3.6% discount adjustment for Variety B's large-sized seed. Variety C's seed size is 3,000 seeds-per-pound. Since Variety C's seed count exceeds the 2,800 seeds-per-pound base, the grower will not receive a discount adjustment.

Why is it needed?

- The Pioneer Seed Size Value Guarantee helps reduce the amount of variation in seed cost per acre for growers ... and helps them more accurately plan their seed cost in advance.
- The Seed Size Value Guarantee also helps growers maintain optimum planting rates on large-sized seed varieties rather than reduce their planting rates to compensate for cost.
- The Seed Size Value Guarantee allows growers to make their product selections based on varietal genetics and traits that will maximize their profit potential rather than compromising yield potential, performance and agronomics by simply choosing varieties with the highest seed count.

Grower benefits

- Customer purchase decisions can be focused on choosing the best genetic package for every acre versus "shopping" for small-seeded varieties and lot numbers.
- Seed cost variability due to seed size variation is reduced.
- Pioneer customers receive a graduated discount adjustment for large-sized soybean seed (applied to lot numbers larger than 2,800 seeds per pound).

So plant the varieties that will help you make the most from every acre you plant — Pioneer brand soybeans. See your Pioneer sales professional.

- It's important to note the Pioneer product lineup — along with our competitors' — contains large-, medium- and small-seeded varieties.
- Many factors affect the seed size of a soybean variety, including genetics and seasonal environmental growing conditions.
- The Pioneer Soybean Seed Size Value Guarantee provides an equitable solution for those growers who are concerned about the economics of planting large-seeded varieties by establishing the 2,800 seeds-per-pound base.

Pioneer® brand products are provided subject to the terms and conditions of purchase which are part of the labeling and purchase documents.

Soybean Seed Treatment for 2012

New Performance-Boosting Biological

A new biological product exclusive to Pioneer highlights our 2012 lead treatment offering for Pioneer® brand soybeans. The lead offering consists of three on-seed components: a fungicide, an insecticide and the new biological/polymer product called **PPST 2030**.

- **FST (fungicide):** Protects seed and seedlings from seed- and soil-borne pathogens such as *Fusarium* and *Pythium*.
- **IST (insecticide):** Provides systemic protection of planted seeds and seedlings from troublesome insects.
- **PPST 2030 (biological/polymer):** NEW PPST 2030 is a proprietary, seed-applied biological product developed exclusively for Pioneer. PPST 2030 contains three performance-boosting biological elements that enhance nitrogen-fixing nodulation and nutrient uptake in soybeans. These living microorganisms are incorporated into a polymer-based formulation that provides uniform seed coverage and a high-quality, distinctive green visual appearance.

Seedlings on left treated with PPST 2030 + FST/IST. Seedlings on right are untreated. Treated and untreated seedlings are the same variety and grown under identical field conditions.

Pioneer Premium Seed Treatment helps protect your Pioneer® brand soybeans from early-season diseases and insects, helping maximize their genetic yield potential at harvest.

Soybean Treatment Offerings for 2012

| PPST | Ingredients/Formulation | Benefits |
|---|--|---|
| FST (Fungicide) | Trifloxystrobin (Trilex®) | Seed & seedling protection against seed-borne fungi causing seed decay and the soil-borne pathogens, <i>Rhizoctonia solani</i> and <i>Fusarium</i> . |
| | Metaxyl (Alliance®) | Systemic control of <i>Pythium</i> damping off. Also available at higher rate for <i>Phytophthora</i> control. |
| IST (Insecticide) | Imidacloprid (Gaucho®) | Systemic protection of planted seeds and seedlings from damage caused by seed corn maggot. Reduction in feeding damage caused by soybean aphids & over-wintering bean leaf beetles. |
| PPST 2030* (Biological/Polymer Product) | Proprietary formulation featuring: <ul style="list-style-type: none"> • biological growth enhancement technology • green coating with polymer | <ul style="list-style-type: none"> • Enhanced nitrogen availability resulting from improved nodulation helps soybean plants resist environmental stresses. • Biological components incorporated into a distinctive green polymer coating that helps improve seed flow through planting & seed handling equipment. |
| PPST 120+* (Rhizobia Inoculant/Extender) | <ul style="list-style-type: none"> • Rhizobia inoculant • Extender component contains nutritional ingredients to extend rhizobia life | <ul style="list-style-type: none"> • Provides abundant source of beneficial rhizobia for geographies where additional rhizobia are desired. • Extender may be used to prolong on-seed rhizobia life. |
| IST/NST* (Insecticide/Nematode) | Clothianidin & Bacillus Firmus (Poncho®/VOTIVO®) | Nematode Protection: Combines early-season insect control with protection from all significant nematode types, including soybean cyst nematodes. |
| Signal Molecule and Inoculant | Lipo-chitooligosaccharide Bradyrhizobium japonicum (Optimize 400®) | Improved stand establishment, root mass and early-season plant health and vigor. |

*New for 2012 planting season.

Pioneer On-Farm Seed Treatment Trial Locations

Extensively tested in field trial locations by Pioneer
Agronomy Sciences

Just in time. Just down the road.

Treated soybeans are available from a Pioneer production
facility or from a participating Pioneer sales professional.

PPST 120+ Rhizobia Inoculant/Extender

New PPST 120+ is a premium on-seed, inoculant plus extender product developed exclusively for Pioneer that delivers a high concentration of beneficial rhizobia bacteria to the soybean plant.

An ideal companion to PPST 2030, PPST 120+ provides an abundant supply of rhizobia to further enhance the performance-boosting biological elements contained in PPST 2030 that helps improve nitrogen-fixing nodulation, nutrient uptake and rhizobial activity in soybeans.

PPST 120+ also contains an extender component to help maintain on-seed rhizobia health for up to 120+ days (when stored at 50 degrees temperature with PPST 2030 and Pioneer FST/IST on-seed treatment package).

PPST 120+ Profile & Benefits

- Provides an abundant source of beneficial rhizobia bacteria for geographies where additional rhizobia are needed.
- Excellent companion product to PPST 2030 + FST/IST seed treatment package.

- High concentration of premium rhizobia inoculants contained in patent-pending, highly permeable bladder wall packaging to help maintain extended rhizobia health.
- Extender component of nutritional ingredients may be used to help prolong on-seed rhizobia life up to 120+ days to provide added flexibility from the time inoculant is applied to when the seed is planted.
- Treater-friendly formulation helps reduce bridging issues.

Application & Packaging Notes

- Apply at rate of 2.25 fluid ounces per hundredweight (1.75 fluid ounces/hundredweight of inoculants plus 0.5 fluid ounces/hundredweight of extender).
- Packaged four bladders per case: two bladders of inoculant (brown liquid) and two bladders of extender (green liquid).
- Each case of PPST 120+ inoculant/extender treats the equivalent of 200, 50-pound units of seed.
- Extender liquid should be thoroughly agitated and mixed per instructions prior to application.
