Delivering Success™

November 12, 2013

Dear Valued Customer,

Farming is complex. Everyone's situation is different. "One-size-fits-all" products and programs don't cut it anymore. You want flexibility and you want choices. That's why it's important to carefully review all of your options. One way to do this is by studying the fall harvest data from all the seed companies you are considering for future purchases.

When choosing products for your operation, be sure to partner with companies that will provide reliable yield and agronomic data. Also, hybrid and variety decisions should be based on data from at least 20 test locations collected over a number of growing seasons. This ensures that observed differences are genetic and not the result of environment, harvest maturity or sampling error. Keep in mind that you should select a *total value package* that may include herbicide or pest resistance, yield, standability, disease resistance and other important traits.

I've enclosed some data from your area that might be helpful as you begin planning for 2014 planting. I'll be in touch with you soon to help you review this and other information. Remember, focus on value and income potential when making your planting decisions and know that DuPont Pioneer will be with you every step of the way to provide the best products, services and information available on the market today.

In the meantime, I'd also encourage you to visit the DuPont Pioneer website at www.pioneer.com for more product and performance information. Also visit www.pioneer.com/yield for local plot performance data.

Sincerely,

Langfritz Seed Inc.
Authorized Pioneer Sales Representative

Allison, IA 50701

2013 Growing Season Summary

The 2013 crop growing season was split up into two totally different weather patterns. The early half of the season, from early April through July 1, was far above average for rainfall, and it was far below average for temperature. In the second half of the growing season much of the rain shut off in areas. Thankfully we had cool conditions during grain corn grain fill which allowed for excellent kernel set.

Due to the cold, wet conditions, the majority of the corn was planted the week of May 13 to the 19th in many cases less-than-ideal conditions. We received some heavy rains after that period that caused ponding, saturated soils and stand loss. The heavy rains caused severe nitrogen loss and a very shallow root system on corn. This would certainly impact yields later, depending on when various areas ran out of nitrogen, and/or some of our soils became more moisture stressed. These conditions have caused extreme variability in yields across the area, and within the fields.

On the positive side, we have received plenty of sunlight and experienced little disease in the corn. The crops with adequate nitrogen, a good stands and placed on soils with good water-holding capacity have had better-than-expected yields. Corn-on-corn fields tend to be yielding a bit less than corn planted on soybean ground due to several reasons - heavy corn rootworm pressure, inadequate amounts of nitrogen and more drought stress in those fields.

Soybeans were planted over a long period of time from mid-May to early July. Many soybean yields have been below normal for several reasons. The most critical factor impacting soybeans was the lack of rain from July 1st to September 15th. In general, the pod counts were low. The pods that were retained aborted beans, and the resulting seed size is smaller which really lowers yield. The best performance tends to be the fields planted in mid-May that caught rain in early August and were on soils with good water-holding capacity.

Harvest Performance Summary Index

Page(s):

3-5	Corn Rootworm Management & Goss' Wilt Info
6	2014 Corn Products by Segment
7-9	2014 Corn Hybrid Notes/ Placement Recommendations
10-15	New Corn Hybrid Profiles
16-30	Butler County Corn Yield Data
31-71	Blackhawk, Bremer & Grundy County Corn Yield Data
72-73	2014 Soybean Variety Notes/Placement Recommendations
74-78	New Soybean Variety Profiles
79-85	Butler County Soybean Yield Data
86-98	Blackhawk, Bremer & Grundy County Soybean Yield Data

How to Make the RIGHT Hybrid Selection Choices - More Often.

1. *Do not look at just one location as strips can vary due to things besides the hybrid or variety:*

- Compaction
- Crop history
- Uneven fertilizer or manure application
- Soil type differences
- Uneven plant height
- Tillage
- Manure history
- Insect damage
- Herbicide overlap or damage

2. *The more locations that you compare the odds of selecting the best hybrid or variety increase!*

Chances of selecting a hybrid with a documented yield advantage

<i>Number of Locations</i>	<i>12 Bushels/A</i>	<i>6 Bushels/A</i>
1	60%	52%
10	90%	75%
30	95%	90%
200	98%	95%

3. *Plot size does affect the odds of selecting the "Best" hybrid:*

<i># of Hybrids in Plot</i>	<i>Chances of Finding the Best Hybrid</i>
2	52%
3	42%
4	33%
10	13%
20	7%
30	6%

* Based on one hybrid having a 6 Bu/A Advantage.

4. *The larger the percentage wins for a hybrid, the better the yield:*

<i>Yield Advantage</i>	<i>Percent Wins</i>
0	50%
2	56%
5	65%
10	78%
15	88%

* Comparing two hybrids, side-by-side at 150 bushel yield level and .05 LSD.

Silk Clipping

CRW Larvae on Corn Roots

CRW Root Damage

Many fields in the Corn Belt have experienced heavy corn rootworm pressure in 2011 and 2012. In addition, some fields have shown lodging and unexpectedly high levels of root injury on corn hybrids where Corn Rootworm (CRW) control has been inadequate.

Evaluating Corn Rootworm Levels:

As a grower, it is important to scout fields and monitor insect populations throughout the year. These insect pressures change along with growing conditions. Scouting will enable you to assess the need for a Bt trait and/or soil insecticide, which is critical to choosing the right product for each acre you plant.

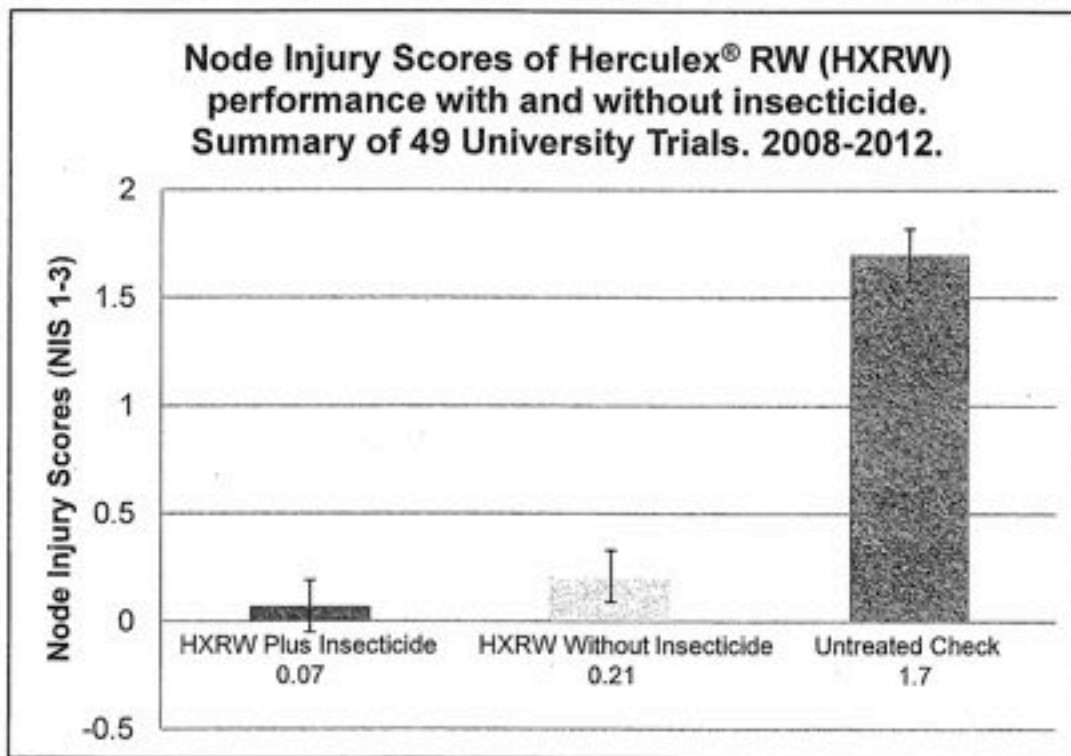

1. Evaluate roots mid to late June for larvae feeding.
2. During pollination look for adults clipping silks.
3. Evaluate during the grain fill period adult rootworm beetle populations to monitor migration of adults to later planted/full season products for potential egg laying. Adult CRW beetles migrate to find fresh silks and pollen to feed on.

While CRW can be a devastating pest, they can be managed by implementing several management options. The key to successful CRW management is to annually change management strategies of the pest. Using the same tactic year after year leads to heavy pressure situations and possible resistance development.

Management Options:

1. Rotating to soybeans is the single most effective option as CRW cannot survive on soybean roots.
2. If planting corn after a CRW control failure or very heavy pressure in 2012, use a Herculex® XTRA Insect Protection (HXX) corn hybrid with soil insecticide. Once CRW levels return to lower levels, discontinue use of insecticide with HXX to reduce potential resistance development.
3. For resistance management, use a non CRW corn hybrid with soil insecticide on fields where CRW populations are under control and populations are relatively low.
4. Scout your fields in 2013 and if you find high levels of CRW adults, use a properly timed aerial/ground insecticide application to reduce adult egg laying for 2014. This procedure is often referred to as "beetle bombing". If adult control was not an option for fields with high levels of adults, use a soil insecticide with HXX in 2014.
5. Manage CRM/planting dates to reduce beetle migration to late pollinating fields.
6. Follow all refuge requirements to preserve trait durability, including using Optimum® AcreMax®1 (AM1) and Optimum® AcreMax® Xtra (AMX) products.

University data shows that Herculex® RW Insect Protection (HXRW) performs very well, with or without the use of a soil insecticide.

Data compiled from public reports of university trials in Iowa, Illinois, South Dakota and Nebraska from 2008 through 2012.

AM1— Contains the Optimum® AcreMax® Insect Protection System with an integrated refuge solution. HXRW— The Herculex® RW Insect Protection trait contains proteins that provide enhanced resistance against western corn rootworm, northern corn rootworm and Mexican corn rootworm. HXX— Herculex® XTRA contains the Herculex I and Herculex RW genes. Herculex® Insect Protection technology by Dow AgroSciences and Pioneer Hi-Bred. ® Herculex and the PK logo are registered trademarks of Dow AgroSciences LLC. ® YieldGard, the YieldGard Corn Borer Design and Roundup Ready are registered trademarks used under license from Monsanto Company. PRODUCT POSITIONING TO MANAGE

Goss's Bacterial Wilt

Goss's Wilt has been found in the central corn belt in the past, having been confirmed in Wisconsin, Illinois and Iowa in the early 1980's. The extent of acres affected in 2011 in Iowa is more dramatic than prior years. We know the best tool to manage Goss's Wilt is choosing tolerant hybrids. As we prepare to position products for next season, consider the following guidelines.

1. Understand infection level

Goss's Wilt overwinters in corn residue so fields that are continuous corn have the highest risk of future infection. While other plants (grain sorghum, shattercane, green foxtail, barnyard grass) have shown to harbor the bacteria, corn residue is the main source of inoculum. The bacterium overwinters primarily in stalks, but as residue decomposes the ability of the bacteria to survive declines.

Another key point is to ensure that Goss's Wilt is present in the field. There are multiple factors that can cause brown leaves in a corn crop. These can include:

- Northern Corn leaf blight
- Anthracnose Top Dieback
- Sunscald
- Drought
- Hybrid senescence (maturing from the top)
- Other foliar diseases

Be sure to verify a suspected Goss's Wilt infection in order to make the best management plan.

While it is unrealistic to describe all scenarios to predict disease risk, the following table has example suggestions for using the Pioneer Hi-Bred disease ratings to place Pioneer brand hybrids.

EXAMPLES OF GOSS'S WILT RISK ASSESSMENT			
Highest Risk	Moderate Risk	Moderate Risk	Lowest Risk
Continuous corn	Continuous corn	Corn/soy rotation	No disease present in field prior two years
Susceptible hybrid with significant infection in prior year	Slight infection in prior year	Susceptible hybrid with significant infection 2 years ago	Tolerant hybrid planted prior year and going to corn in current year
Heavy residue on soil surface	Little stalk residue on soil surface		
PIONEER HI-BRED GOSS'S WILT DISEASE SCORES (THROUGH 2010)			
7+ or higher	6+ or higher	5+ or higher	4+ or higher

*Disease and Pest Ratings: 8-9 = highly resistant; 6-7 = Resistant; 4-5 = Moderately Resistant; 1-3 = Susceptible

2. Know your products There is no standard scale across the seed industry that allows accurate comparison of Goss's Wilt tolerance between companies. Pioneer Hi-Bred uses several techniques to screen and characterize products for tolerance to Goss's Wilt. These include screening nurseries where artificial infection is induced, scoring Research and IMPACT locations where natural infections occur and using genetic markers to sort inbreds and hybrids during product development. The results of the artificial and natural infections are used to assign Goss's Wilt scores to commercial products at the RCD1 stage, or first year of commercial product volumes. Stay current on product observations in your area and updates to product characterization from your Account Manager or Area Agronomist.

3. Make a plan Past experience managing this disease in Nebraska and western states indicates the highest risk of future problems tends to be in high risk fields that were planted with highly susceptible hybrids that then had a weather event (hail or wind) allowing broad infection in the crop. Identifying those "hot spots" is key in getting the best solution in place for next season. Using a Pioneer FIT® Field Plan to sort and track highest risk fields and the appropriate product for those fields will increase your odds of getting the right product on the right acre.

Right Product. Right Acre.

P9917AMX: RIB Triple (HXX, YGCB, LL, RR2)

- This is an excellent drought product in the 100 day triple area.
- Better yield punch than 9910 but gives up on root and stalks from P9910.
- Strong emergence, towards the top of the list on fungicide priority.
- Late season stalk strength is a watch out, place on high K soils and harvest early to avoid weak stalks
- Good candidate for V5-V8 fungicide application to help out on anthracnose stalk rot

P0062AMX: RIB Triple (HXX, YGCB, LL, RR2)

- Nice yield advantage over 9910 and 9917. Short plant and short ear height.
- Strength many times for emergence, Avoid placing in severely sandy soils.
- Keep on high potassium soils to help stalk strength. Short plant with lower ear placement.
- GLS is a concern and would be a good fungicide candidate to help increase stalk strength,
- Good candidate for V5-V8 fungicide application to help out on anthracnose stalk rot.
- Best suited for high yield environments with higher fertility soils

P0193AM: RIB Double (HX1, YGCB, LL, RR2)

- All out replacement for 37K11 and 36V53 and good companion to P0216HR.
- One of our biggest rooted double corn products
- New yield level for this CRM, Not a 36V53 for early season emergence but does establish a great stand
- Excellent roots and drought tolerance. Upright leaves. Good candidate for fungicide.
- While it might have been a bit off on yield in 2013 due to oversaturated soils, it has one of the highest yield advantages in our entire lineup in this this maturity over the last 3 years.

P0297AM1: Triple (HXX, YGCB, LL, RR2) and P0297AMX: RIB Triple (HXX, YGCB, LL, RR2)

- 102 day maturity with a 96 day silk. Very short plant stature with great roots.
- Keep off sandy soil due to plant and ear heights. Will likely respond to a fungicide application.
- Big pile for 2014 sales and new leader in the 100 day triple market.
- Very short so be careful with it in plots for shading, not much residue left for corn/corn acres
- Spray with a fungicide and have ample Nitrogen program to aid in stalk quality into harvest.

P0313AM1: Triple (HXX, YGCB, LL, RR2)

- Great addition to mid triple lineup. Can move P0528 and P0448 piles here for earlier corn.
- Nice yield advantage even over P0448 family in NE Iowa, SE MN, and SW WI.
- One of our biggest rooted double corn products
- Exceptional Goss tolerance. NCLB is a concern – good candidate for fungicide.

P0407AMXT: RIB Triple (HXX, Agrisure RW, YGCB, LL, RR2)

- Replacement for P0413AM1 and P0448AMX. 100 day silk makes this product move north nicely.
- Can have higher test weight than P0528AMX – hard to believe! Very fast out of the ground.
- It may show up light on the yield monitor and heavy when you empty the bin!
- Dual mode of action for rootworm control. Great product for long term history of corn on corn.
- Good choice for fungicide in heavier GLS and NCLB fields

P0448AMX: RIB Triple (HXX, YGCB, LL, RR2) and P0448R: (RR2)

- Solid all-around agronomics will allow for wide adaptability with high TW.
- Not quite as good as 0413 and 0528 when it comes to Goss.
- Good roots and late season standability. Keep of drought prone soils.
- Strong disease package with that adapts well to different environments.

P0453AM: RIB Double (HX1, YGCB, LL, RR2)

- Having another outstanding year yield wise. Early season roots are a watch out.
- Will get Goss earlier than many hybrids but fights it off quite well.
- Definite leader that will run with any competitor in this maturity.
- Good leaf disease resistance package.

P0533AM1 Triple (HXX, YGCB, LL, RR2)

- Short plant with low ear placement. While not a big root mass, the plant stature definitely gives it acceptable standability during the storms.
- Due to it being so short the yield in plots is being lowered by shading - head tall at flag leaf time.
- Above average emergence and stand establishment. Upright leaves.
- Strong drought tolerance. 97 day silk provides a long grain fill period
- Keep a strong N program under its feet for max yield and stalk quality – along with a fung. application
- Good candidate for V5-V8 fungicide application to help out on anthracnose stalk rot

P0528AMX: RIB Triple (HXX, YGCB, LL, RR2)

- Defensive 105 day triple with tremendous root strength
- Solid drought tolerance that is suitable for all soil types
- Very heavy test weight with industry leading Goss' Wilt tolerance

P0636AMX: RIB Triple (HXX, YGCB, LL, RR2) and P0636AM: RIB Double (HX1, YGCB, LL, RR2)

- Both double and triple are once again having a very good year
- Great emergence on this product as well as roots and drought.
- Main watch out is Goss' Wilt and TW is a little lower compared to other products
- Fungicide application will help out on late season stalks
- Do not let this be your last hybrid you combine

P0652AMX: RIB Triple (HXX, YGCB, LL, RR2)

- One of the many new impressive hybrids in our lineup
- Very good emergence, roots, and drought tolerance.
- Shorter and better on Goss' Wilt than P0636, extremely high TW
- Moderate NCLB score: consider fungicide application

P0987AMX: RIB Triple (HXX, YGCB, LL, RR2)

- Replacement product for P0832AM1 with more agronomics.
- Multipurpose hybrid for silage/grain with good digestibility.
- Wide leaf pattern to help capture sunlight. Shorter plant height and excellent against Goss' Wilt.
- Responds well to higher planting populations due to slower emergence

P1151AM: RIB Double (HX1, YGCB, LL, RR2)

- Very good roots in almost all locations. Had another knockout year for yields.
- Good candidate for fungicide application – not as good as 34F07 on GLS.
- Keep off corn on corn acres that are poorly drained.
- One of our best drought tolerant products. 106 day silk make this product move north nicely.

P1023AM: RIB Double (HX1, YGCB, LL, RR2)

- Better disease package and roots than P1151AM
- Best staygreen in our lineup, least likely to respond to a fungicide
- True 110 day product, will hold on to its moisture longer than 1151AM

P1142AMX: RIB Triple (HXX, YGCB, LL, RR2)

- New 111 CRM Triple that acts like 108 maturity
- Very strong roots and excellent drought tolerance
- Moderate GLS and NCLB scores: consider fungicide application
- 2-3 points drier than P1162

P1221AMXT RIB Triple (HXX, Agrisure RW, YGCB, LL, RR2)

- Top end yield potential in a dual mode complete RIB
- Replaces P1215AM1 with better roots and improved drydown
- Very good roots, stalks, and disease package

Notes and Explanations:

(1) $YIELD = (100 - MOISTURE) \times (FACTOR) \div (HARVESTED\ LENGTH\ IN\ FEET) \div (HARVESTED\ WIDTH\ IN\ INCHES)$. Not applicable if weighed with Yield Monitor. Yield monitor yields are estimates of yield taken from the yield monitor data files. Yield estimate calculations are dependent on the equipment and software manufacturer. Yield estimates from a yield monitor can vary significantly from actual yields of hybrids/varieties at a single point, within areas of a field or in aggregate. Any number of factors such as inappropriate calibration, machine settings, machine dynamics, grain characteristics, temperature, slope, operator error, etc. can impact the accuracy of yield monitor yield estimates.

Temperature, rainfall and solar radiation are estimates based on available data from weather stations in the area. Crop growth indices for individual hybrids, including estimates of silking and maturity dates, are produced by the proprietary EnClass® crop growth model using this weather information. Though crop growth indices produced by the model are calibrated based on historical field observations of products, they may not accurately reflect the growth stage at an individual location.

Where shown, soil information is provided by Soil Survey Staff, Natural Resources Conservation Service, United States Department of Agriculture. Soil Survey Geographic (SSURGO) Database available online at <http://soildatamart.nrcs.usda.gov>.

Information and results contained herein represent the average of all comparisons across the area indicated. Results may not predict future performance and may not be complete. Testing accuracy, area variations and a limited environmental base can give misleading results. Multi-year and multi-location information is a better predictor of future performance. Please use this information as only one component of your product positioning decision.

Insecticide Seed Treatment (IST): Indicates insecticide seed treatment was purchased on the seed.

Fungicide Seed Treatment (FST): Indicates fungicide seed treatment was purchased on the seed.

Nematicide Seed Treatment (NST): Indicates nematicide seed treatment was purchased on the seed.

*** Since the trademark information is derived from each competitor's own product information, DuPont Pioneer makes no representations or warranties as to its accuracy, completeness or suitability.

*EXPORT APPROVAL NOTICE: This product is fully approved in the United States and Canada. Traits included in these products may or may not be approved in key global markets; therefore, the combination of these traits and the grain and certain by-products from THESE PRODUCTS MAY NOT BE APPROVED for all markets. For questions about specific countries please contact your Sales Representative or refer to www.pioneer.com/stewardship. Customers are advised to discuss trait acceptance policies with their local grain handler prior to delivering grain containing biotech traits.

All Pioneer products are hybrids unless designated with AM1, AM, AMRW, AMX and AMXT, in which case they are brands.

Segments:

HX1 - Contains the Herculex® I Insect Protection gene which provides protection against European corn borer, black cutworm, fall armyworm, western bean cutworm, lesser corn stalk borer, southern corn stalk borer, and sugarcane borer, and suppresses corn earworm.

HORN - The Herculex® RW insect protection trait contains proteins that provide enhanced resistance against western corn rootworm, northern corn rootworm and Mexican corn rootworm.

HXX - Herculex® XTRA contains the Herculex I and Herculex RW genes.

YGCB - The YieldGard® Corn Borer gene offers a high level of resistance to European corn borer, southwestern corn borer and southern cornstalk borer. The gene also offers a moderate level of resistance to corn earworm and common stalk borer; and above average resistance to fall armyworm.

LL - Contains the LibertyLink® gene for resistance to Liberty® herbicides.

RR2 - Contains the Roundup Ready® Corn 2 trait that provides crop safety for over-the-top applications of labeled glyphosate herbicides when applied according to label directions.

WX - Wiley. WH - White food corn. YFC - Yellow food corn. AQ - Optimum® AQUAmax® hybrid. BMR - Brown Midrib® Corn.

AMR - Optimum® AcreMax® Insect Protection system with YGCB, HX1, RR2. Contains a single-bag integrated refuge solution for above-ground insects. Do not spray with Liberty®. Not all seeds in the bag are tolerant to Liberty herbicide. In EPA-designated cotton growing counties, a 20% separate refuge must be planted with Optimum AcreMax Xtra products.

AMX-R - Optimum® AcreMax® Xtra Insect Protection system with YGCB, HXX, RR2. Contains a single-bag integrated refuge solution for above- and below-ground insects. Do not spray with Liberty®. Not all seeds in the bag are tolerant to Liberty herbicide. In EPA-designated cotton growing counties, a 20% separate refuge must be planted with Optimum AcreMax Xtra products.

RW/HX1,LL,RR2 (Optimum® TRiseed®) - Contains the Herculex I gene for above-ground pests and the Agrisure® RW trait for resistance to corn rootworm.

AM1 - Optimum® AcreMax® I Insect Protection system with an integrated corn rootworm refuge solution includes HXX, LL, RR2. Optimum AcreMax 1 products contain the LibertyLink® gene and can be sprayed with Liberty® herbicide. The required corn borer refuge can be planted up to half a mile away.

AMRW - Optimum® AcreMax® RW Rootworm Protection system with a single-bag integrated corn rootworm refuge solution includes HXRW, LL, RR2.

AM - Optimum® AcreMax® Insect Protection system with YGCB, HX1, LL, RR2. Contains a single-bag integrated refuge solution for above-ground insects. In EPA-designated cotton growing counties, a 20% separate corn borer refuge must be planted with Optimum AcreMax products.

AUX - Optimum® AcreMax® Xtra Insect Protection system with YGCB, HXX, LL, RR2. Contains a single-bag integrated refuge solution for above- and below-ground insects. In EPA-designated cotton growing counties, a 20% separate corn borer refuge must be planted with Optimum AcreMax Xtra products.

AMXT (Optimum® AcreMax® XTreme) - Contains a single-bag integrated refuge solution for above- and below-ground insects. The major component contains the Agrisure® RW trait, the YieldGard® Corn Borer gene, and the Herculex® XTRA genes.

In EPA-designated cotton growing counties, a 20% separate corn borer refuge must be planted with Optimum AcreMax XTreme products.

RW, YGCB, HXX, LL, RR2 (Optimum® IntraSeed® XTreme) - Contains the Agrisure® RW trait, the YieldGard® Corn Borer gene, and the Herculex® XTRA genes for resistance to corn borer and corn rootworm. Optimum IntraSeed XTreme will be the major component of Optimum AcreMax XTreme.

AVBL, YGCB, HX1, LL, RR2 (Optimum® Leptra™) - Contains the Agrisure Viper® trait, the YieldGard® Corn Borer gene, the Herculex® I gene, the LibertyLink® gene, and the Roundup Ready® Corn 2 trait.

AMRW-R - Optimum® AcreMax® RW Rootworm Protection system with a single-bag integrated corn rootworm refuge solution includes HXRW, RR2. Do not spray with Liberty®. Not all seeds in the bag are tolerant to Liberty herbicide.

VT2P - Genuity VT Double PRO - Contains the Genuity VT PRO genes and the Roundup Ready® Corn 2 trait. Provides resistance to corn borers and tolerance to glyphosate herbicides.

PIONEER

SSTX - Genuity SmartStax® - contains the Genuity VT Triple PRO traits, Herculex XTRA traits, the LibertyLink gene, and the Roundup Ready Corn 2 trait. Provides resistance to corn borers, corn rootworms, tolerance to glyphosate herbicides, and resistance to Liberty herbicide.

AV-3110 - Agrisure Viptera® 3110 trait stack - Contains the Agrisure Viptera®, Agrisure® CB, and Agrisure® GT traits.

AV-3111 - Agrisure Viptera® 3111 trait stack - Contains the Agrisure Viptera®, Agrisure® CB, Agrisure® RW, and Agrisure® GT traits.

YGC8.HX1.LL.RR2 (Optimum® IntraSeed®) - Contains the YieldGard® Corn Borer gene and Herculex® I gene for resistance to corn borer.

YGC8.HX2.LL.RR2 (Optimum® IntraSeed®) XTRA - Contains the YieldGard® Corn Borer gene and the Herculex XTRA genes for resistance to corn borer and corn rootworm.

VT2P-RIB - Contains the Genuity® VT Double PRO RIB Complete™ technology for above-ground insect protection.

AV-3220 - Agrisure® Viptera® 3220 trait stack - Contains the Herculex® I, Agrisure Viptera®, Agrisure® CB, and Agrisure® GT traits.

AS-3122 - Agrisure® 3122 trait stack - Contains the Herculex® XTRA, Agrisure® CB, Agrisure® RW, and Agrisure® GT traits.

AS-3011A or AS-4011 - Agrisure® 4011 trait stack - Contains the Agrisure 3000GT traits, and Agrisure Artesian™ technology.

AVBL.CB.LL.GT - Contains the Agrisure Viptera® 3110* trait stack: Agrisure Viptera®, Agrisure® CB and Agrisure® GT traits.

AS-3122-EZR - Contains the Agrisure® trait stack and the E-Z Refuge® technology.

AS-3011 - Contains the Agrisure® 3000GT traits.

ART - Syngenta traits or trait stacks followed by an 'A'; also contain the Agrisure® Artesian™ technology such as AS-3011A or GTA.

GT - Contains the Agrisure® GT trait that provides tolerance to glyphosate herbicides.

CB - Contains the Agrisure® CB trait that provides resistance to corn borers.

RW - Contains the Agrisure® RW trait that provides resistance to corn rootworms.

VT - YieldGard VT Rootworm®R2 contains both the YieldGard Rootworm gene and the Roundup Ready Corn 2 trait.

VT3 - YieldGard VT Triple contains the YieldGard Rootworm gene, the YieldGard Corn Borer gene and the Roundup Ready Corn 2 trait.

VT3P - Genuity VT Triple PRO contains the YieldGard VT gene, YieldGard Rootworm®R2, and the Genuity VT PRO gene.

Provides resistance to corn borers, corn rootworms, and tolerance to glyphosate herbicides.

SSTX-RIB - Contains either the SmartStax® RIB Complete technology or the REFUGE ADVANCED™ powered by SmartStax® technology.

DG - Contains the Genuity® DroughtGard™ technology.

AV-3220-EZR - Contains the Agrisure Viptera® trait stack and the E-Z Refuge® technology.

Herculex® Insect Protection technology by Dow AgroSciences and Pioneer Hi-Bred. Herculex® and the HX logo are registered trademarks of Dow AgroSciences LLC.

YieldGard®, the YieldGard Corn Borer Design and Roundup Ready® are registered trademarks used under license from Monsanto Company.

Liberty®, LibertyLink®, the Water Droplet Design and Poncho® are trademarks of Bayer.

Cruise® is a registered trademark of a Syngenta Group Company.

Agrisure®, Agrisure Viptera® and E-Z Refuge® are registered trademarks of, and used under license from, a Syngenta Group Company.

Agrisure® technology incorporated into these seeds is commercialized under a license from Syngenta Crop Protection AG.

All products are trademarks of their manufacturer.

Right Product. Right Acre.

P22T69R:

- This new T-series soybean variety is widely adapted across Northern Iowa and brings industry leading yield potential
- Very good FEC, WM, and SDS
- **Peking SCN source** for fields that have been using P188788 for a while when planted to soybeans
- Wider canopy vs. 92Y51 with excellent harvest standability
- Maturity acts closer to 2.0 in most fields with very solid agronomics

P22T41R2:

- New Yield level for 2.2 maturity soybean
- Very good WM tolerance in 2013 with similar plant height and canopy width as 92Y74's
- Excellent BSR and can tolerate high pH soils
- Nice companion to P22T69R
- Very limited supply for 2014

92Y22:

- Offensive early group 2 soybean with nice yield increase, nice companion to 22T69R
- Good BRS tolerance, good WM tolerance, and average SDS tolerance
- Medium plant height (similar to 92Y75's), with slender canopy width, small sized soybean
- Excellent harvest standability, keep off high pH soils

92Y32:

- Defensive soybean that brings good yield
- Very good BSR and SDS tolerance, slightly above average for WM
- Excellent choice for early planting into cool soils
- Similar plant height as 92Y51's with a very bushy canopy width. Keep off high pH soils

P24T19R:

- Wider canopy and shorter variety vs. 92Y51
- Will be a nice replacement for 92M40 and 92M54
- Very strong on FEC and phytophthora so it will work well on high pH and poorly drained soils

P25T51R:

- New yield level in this maturity, short soybean height similar to 92Y74's
- Contains 1C and 3A phytophthora resistance genes which should perform well in wet soils in spring
- Avoid fields prone to heavy infestations of white mold
- For best results place on fields with history of lower disease pressure or fields coming out of C/C rotation

92Y51:

- Exceptional in white mold environments and field emergence
- One of our best soybeans along with P28T33's for sudden death tolerance
- Tall plant with very slender canopy width makes it a good fit in narrow rows
- Well suited for a wide range of soils with good harvest standability
- Lack of shading in between the rows on wide row spacing promotes moisture loss and is evident especially on sandy soils.

92Y74:

- Industry Leading White Mold tolerance with a canopy width similar to 92Y75's
- Great yields the past two years. SDS score is average but good tolerance in 2010 with heavy pressure.
- Short plant height, so we need to keep them off sandy soils
- Easy threshing variety with great harvest standability

92Y75:

- One of the top yielding soybeans in 2012 and 2013. Industry leading BSR tolerance
- Taller plant height than 92Y74's, but similar canopy width
- Nice yield advantage over 92Y74's in absence of white mold

P28T33R:

- New yield level full season soybean that is widely adaptive of large geographic area
- One of our best soybeans along with 92Y51's for sudden death tolerance
- Avoid fields prone to heavy infestations of white mold and high pH soils

P22T69R

22 RM

Early Group 2 Leader Variety

- Replacement for 92Y11
- Higher yield companion to 92Y22
- Very good FEC, WM and SDS
- Peking SCN gene
- Great variety for fields that have high levels of SCN pressure

P24T19R

24 RM

Mid Group 2 Leader Variety

- Replacement for 92M40 & 92Y51
- Wider canopy and shorter variety
- New yield level for 2.4 RM
- Not as strong as 92Y51 on WM prone fields
- Will work well in 30" rows due to canopy

25 RM

Mid Group 2 Offensive Variety

- Offensive replacement for 92Y60 and 92M54
- Very strong performance in 2013
- Watch-out: WM tolerance
- Keep on well drained farms with good fertility for best results
- Great option for long term C/C fields going to soybeans in 2014

Key Environments

Notes and Explanations:

(1) $YIELD = (100 - MOISTURE) \times (LBS. OF GRAIN) \times (FACTOR) \div (HARVESTED LENGTH IN FEET) \div (HARVESTED WIDTH IN INCHES)$. Not applicable if weighed with Yield Monitor. Yield monitor yields are estimates of yield taken from the yield monitor data files. Yield estimate calculations are dependent on the equipment and software manufacturer. Yield estimates from a yield monitor can vary significantly from actual yields of hybrids/varieties at a single point, within areas of a field or in aggregate. Any number of factors such as inappropriate calibration, machine settings, machine dynamics, grain characteristics, temperature, slope, operator error, etc. can impact the accuracy of yield monitor yield estimates.

Temperature, rainfall and solar radiation are estimates based on available data from weather stations in the area. Crop growth indices for individual hybrids, including estimates of sowing and maturity dates, are produced by the proprietary EriClass® crop growth model using this weather information. Though crop growth indices produced by the model are calibrated based on historical field observations of products, they may not accurately reflect the growth stage at an individual location.

Where shown, soil information is provided by Soil Survey Staff, Natural Resources Conservation Service, United States Department of Agriculture. Soil Survey Geographic (SSURGO) Database available online at <http://soildatamart.nrcs.usda.gov>.

Information and results contained herein represent the average of all comparisons across the area indicated. Results may not predict future performance and may not be complete. Testing accuracy, area variations and a limited environmental base can give misleading results. Multi-year and multi-location information is a better predictor of future performance. Please use this information as only one component of your product positioning decision.

*** Since the trial/segment information is derived from each competitor's own product information, DuPont Pioneer makes no representations or warranties as to its accuracy, completeness or suitability.

Segments:

RR - Varieties with the original Roundup Ready® (RR) technology are resistant to labeled glyphosate herbicides. This technology allows for post-emergent applications of glyphosate herbicide without crop injury or stress (see herbicide labels). Labeled glyphosate herbicides should only be used over the top of those varieties that carry the Roundup Ready gene designation. NOTE: A soybean variety with a herbicide resistance trait does not confer resistance to all herbicides. Spraying herbicides not labeled for a specific soybean variety will result in severe plant injury or plant death. Always read and follow herbicide label directions. Roundup Ready® is a registered trademark used under license from Monsanto Company.

STS - Varieties with the DuPont™ STS® gene are tolerant to Synchrony® STS®, Classic®, and Pinnacle®, and Pinnacle®. This technology allows post-emergent applications of sulfonylureas (see herbicide product labels) without crop injury or stress. NOTE: A soybean variety with a herbicide resistance trait does not confer resistance to all herbicides. Spraying herbicides not labeled for a specific soybean variety will result in severe plant injury or plant death. Always read and follow herbicide label directions.

DuPont™, STS®, Synchrony®, STS®, Classic® and Pinnacle® are trademarks of DuPont or its affiliates.

LL - Denotes soybean variety with the LibertyLink® gene available from Pioneer. Varieties with the LibertyLink gene are resistant to LibertyLink herbicide.

Liberty®, LibertyLink® and the Water Droplet Design are trademarks of Bayer.

SCN = Displays good to excellent resistance to soybean cyst nematode.

Insecticide Seed Treatment (IST) indicates an insecticide seed treatment was purchased on the seed. Potential insecticide seed treatments include Gaucho®, purchased or applied to the seed.

Fungicide Seed Treatment (FST) indicates a fungicide seed treatment was purchased on or applied to the seed prior to planting. Potential fungicide seed treatments may include but are not limited to: Allegiance®, Agron® XL, Maxx®, Agron® Maxx, Agron® Maxx RTA, Captain®, Kickstart®, Protige®, SoyGuard®, River®, RTU®, Vitaraz 200®, and Silico®.

RR2Y - Varieties with the Genity® Roundup Ready 2 Yield® trait are resistant to labeled glyphosate herbicides. This technology allows for post-emergent applications of glyphosate herbicide without crop injury or stress (see herbicide label). Labeled glyphosate herbicides should only be used over the top of those varieties that carry the Roundup Ready or Roundup Ready 2 Yield gene designation. NOTE: A soybean variety with a herbicide resistance trait does not confer resistance to all herbicides. Spraying herbicides not labeled for a specific soybean variety will result in severe plant injury or plant death. Always read and follow herbicide label directions.

Genity® and Roundup Ready® are registered trademarks used under license from Monsanto Company. Roundup Ready 2 Yield® is a registered trademark of Monsanto Technology LLC used under license.

® Registered trademarks of a Syngenta Group Company.

® Registered trademarks of Agrilance, LLC.
